## This Guy Spent an Entire Week in a VR Headset. Here's How It Went Down

VICTOR TANGERMANN, FUTURISM

18 MAR 2019

Jak Wilmot, the co-founder of Atlanta-based VR content studio Disrupt VR, spent 168 consecutive hours in a VR headset - that's a full week - pent up in his apartment.

"This is quite possibly the dumbest thing I've ever done, but welcome to a week in the future," he said in a video about the experiment.

The Skin of Culture: Investigating the New Electronic Reality, 1995, Berrick de Kerckhove

“Centuries ago, matter was defined by two dimensions: mass and energy.” “Today there comes a third one to it: information.... Today, information counts more than mass and energy. The third dimension of matter takes the place of the thing itself.” **“Any kind of matter is about to vanish in favor of information.”**

“Architecture is just about to lose everything that characterized it in the past. Step by step it loses all its elements. **In some way, you can read the importance given today to glass and transparency as a metaphor of the disappearance of matter.** It anticipates the media buildings in some Asian cities with facades entirely made of screens. In a certain sense, the screen becomes the last wall. No wall out of stone, but of screens showing images. The actual boundary is the screen.”

## Virtual reality 'better at spotting Alzheimer's than gold standard test'

Cambridge University scientists developed and trialled a VR navigation test in patients at risk of developing dementia.

By Paul Gallagher

Thursday, 23rd May 2019, 23:01 pm

Updated Friday, 6th September 2019, 15:52 pm

Virtual reality could also help clinical trials of future drugs aimed at slowing down, or even halting, progression of Alzheimer's disease, the researchers said. (FABRICE COFFRINI/AFP/Getty Images)

## Virtual Reality Helping those with Parkinson's Disease Walk

By Jack Carfagno - July 31, 2019

Like 91

Recent work has found virtual reality (VR) to be effective in building balance skills in patients with Parkinson's disease. This system successfully improved patient's obstacle negotiation and balance, as well as their confidence in moving around in their environment, according to their findings

published in *Experimental Biology*.

Walking is a very challenging task for those living with Parkinson's, due to damage in their dopamine-producing neurons. Muscle rigidity, tremors, and impaired speed of gait often lead to falls and injuries in patients with the disease, making balance therapy a common treatment.

## #4 Interface: a cyber-physical interactive media center

**“Architects of the twenty-first century will shape, arrange, and connect spaces (both real and virtual) to satisfy human needs.**  
They will still care about the qualities of visual and ambient environment.

They will still seek commodity, firmness, and delight. **But commodity will be as much a matter of software functions and interface design as it is of floor plans and construction materials. Firmness will entail not only the physical integrity of structural systems, but also the logical integrity of computer systems.** And delight? Delight will have unimagined new dimensions”

Mitchell, W. 1995, City of Bits: Space, Place, and the Infobahn, MIT Press, Massachusetts

Eating in front of the television set became a way of life for many Americans in the 1950's.
